G4 Inc. Introduces Cloud-Based Communication Service to Simplify B2B Customer Experience

Automating B2B Communication to Save Time, Simplify Customer Relationships, and Deliver Better Experiences

HELSINKI, October 18, 2026 — G4 Inc., a consulting company specializing in customer experience, today announced a new cloud-based service designed to improve communication between wholesale businesses and their business customers. Powered by Amazon Web Services (AWS), the solution automates communication processes, simplifies customer relationship management (CRM), and helps businesses save time while delivering better customer experiences.

Wholesale businesses often face challenges in managing communication with multiple business customers. Handling customer inquiries, sending updates, and keeping track of important information can require significant time and effort. These challenges may lead to communication delays, misunderstandings, and reduced customer satisfaction.

G4 Inc.'s new service addresses these issues by providing an easy-to-use and automated communication channel that helps businesses communicate more efficiently with their customers. Through automated notifications, companies can deliver important updates and information directly to their customers, reducing the need for repetitive manual communication.

"Our goal is to make business communication simpler, faster, and more convenient," said a representative of G4 Inc. "We understand that managing customer relationships can be challenging, especially for wholesale businesses dealing with multiple B2B customers. Our solution helps businesses handle communication more smoothly, allowing them to focus on what matters most: their customers and their business."

Designed with usability in mind, the service offers a straightforward way to manage communication and navigate challenging customer service situations. Its automated notifications help ensure that relevant information reaches the right customers at the right time, supporting more consistent communication and stronger business relationships.

By streamlining routine communication tasks, the solution aims to reduce the time spent on customer communication by up to **90%**, enabling businesses to allocate their resources more effectively. The service leverages AWS cloud technology to support a modern, flexible approach to communication management.

With this launch, G4 Inc. reinforces its commitment to improving customer experiences through practical technology solutions. By combining automation, cloud services, and

user-friendly design, the company aims to help wholesale businesses build more efficient communication processes and deliver a smoother experience for their B2B customers.
