G4 Inc. Introduces Cloud-Based Communication Service to Simplify B2B Customer Experience

Automating B2B Communication to Save Time, Simplify Customer Relationships, and Help Food Service Businesses Focus on What Matters Most

HELSINKI, October 18, 2026 — G4 Inc., a consulting company specializing in customer experience, today announced a new cloud-based service designed to streamline communication between wholesale suppliers and their small business customers in the food service industry. The solution automates routine communication, simplifies customer relationship management (CRM), and helps businesses save time while delivering a better customer experience.

Wholesale suppliers that provide food products, ingredients, and other supplies to cafés, restaurants, and catering companies often manage communication with numerous customers. Restaurant managers, café owners, and catering operators need timely and accurate information from their suppliers while simultaneously handling daily operations. For suppliers, responding to recurring inquiries, sending updates, and keeping customers informed can require considerable time and effort. This can lead to communication delays, misunderstandings, and unnecessary administrative work on both sides.

G4 Inc.'s new service addresses these challenges by providing an easy-to-use, automated communication channel between suppliers and their business customers. Through automated notifications, suppliers can share relevant updates and important information with their customers without relying on repetitive manual messages. This helps small business operators and managers stay informed while allowing suppliers to manage customer communication more efficiently.

"Our goal is to make communication between suppliers and their customers simpler, faster, and more convenient," said a representative of G4 Inc. "We understand that café owners, restaurant managers, and catering operators have busy schedules and need reliable information from their suppliers. By automating routine communication, our solution helps both parties spend less time managing messages and more time focusing on their core business activities."

Designed with usability in mind, the service offers a straightforward way to manage customer communication, even in challenging situations. Automated notifications help ensure that important information reaches customers in a timely manner, supporting more consistent communication and stronger business relationships.

" As a café owner, I need to focus on serving customers and running my business, not constantly checking messages or following up on supplier updates. I would expect a service like this to provide timely, clear information and make communication with suppliers much

easier, so I can spend less time on administration and more time on my customers," said a small business owner in the food service industry.

The solution aims to reduce the time spent on customer communication by up to **90%**, enabling suppliers to allocate their resources more effectively and helping their customers avoid unnecessary back-and-forth communication.

With this launch, G4 Inc. reinforces its commitment to improving customer experiences through practical technology solutions. By combining automation and user-friendly design, the company aims to help wholesale suppliers build more efficient communication processes while supporting the everyday needs of cafés, restaurants, and catering businesses.

Frequently Asked Questions (FAQs)

1. What is G4 Inc.'s new communication service?

G4 Inc.'s new service is a cloud-based communication solution designed to help wholesale suppliers automate routine communication with their business customers in the food service industry.

2. Who can benefit from this service?

The service is primarily designed for wholesale suppliers that provide food products, ingredients, and other supplies to cafés, restaurants, and catering companies. It also benefits small business owners, operators, and managers who need to communicate with their suppliers while managing their daily operations.

3. How does the service improve communication between suppliers and customers?

The service automates routine communication and sends notifications to customers, helping suppliers share important information efficiently. This reduces repetitive manual messaging and helps both parties stay informed.

4. How much time can businesses save by using the service?

The service aims to reduce the time spent on customer communication by up to 90%. By reducing repetitive communication tasks, suppliers can manage customer relationships more

efficiently, while small business operators can focus more on their customers and daily operations.

5. Is the service difficult to use?

No. The service is designed to be easy to use and understand, allowing businesses to manage communication more conveniently without adding unnecessary complexity to their daily workflows.

6. What makes this service valuable for small food service businesses?

Café owners, restaurant managers, and catering operators often have busy schedules and need timely information from their suppliers. Automated notifications help them stay updated while reducing the need to check messages or follow up on routine inquiries, giving them more time to focus on running their businesses.
